SKILLS

- Programming: Java
- Frameworks: Spring Boot, JPA/Hibernate
- Web: Servlet, JSP, RESTful API
- Frontend: ReactJS (basic)
- Database: MySQL, PostgreSQL
- Tools: Git, Maven
- Concepts: OOP, MVC Architecture, RESTful Design, Clean Architecture
- Methodologies: Agile/Scrum

LANGUAGE

- English
- Japanese N5

WORK EXPERIENCE

Completed a 4-month internship at FPT Software

ABOUT ME

I am a final-year Software Engineering student at FPT University with hands-on experience in Java back-end development using Spring Boot, Reatjs, and RESTful APIs. I am familiar with OOP, Clean Architecture, and Agile/Scrum practices, and I am eager to develop my skills as a Software Engineer.

I am willing and able to quickly learn new technologies and programming languages to meet project requirements.

PROJECTS

Recipe cooking Web Application

Java | JSP/Servlet | JPA | SQL Server | AI API

- Collaborated in a 2-member team to analyze requirements and define system features
- Implemented data persistence using JPA and applied object-relational mapping (ORM) for entity management
- Integrated a third-party AI API by constructing prompts and handling responses to provide basic recipe suggestions
- Utilized Servlet Listener to capture user activities for simple behavior tracking

Clinic Booking System

Spring Boot | RESTful API | ReactJS | JPA | MySQL

- Collaborated in a team of 5 to develop a clinic management system using SpringBoots & ReatJs
- Led back-end development, designing and implementing RESTful APIs to handle business logic and data processing
- Designed system workflows and implemented role-based functionalities for Admin, Receptionist, and appointment management
- Conducted requirement analysis and modeled system behavior using use case diagrams
- Implemented email notification service for appointment confirmation and status updates
- Followed Agile/Scrum practices during development
- Performed basic unit testing for core functionalities

Sports Field Booking System

Spring Boot | ReactJS | JPA/Hibernate | MySQL | WebSocket

- Implemented ticket management workflows, including ticket issuance and transfer, enabling secure ticket exchange between users
- Designed and developed a newsfeed module to display user activities and system updates
- Built real-time chat functionality to support user communication using event-driven architecture
- Deployed the application to a production environment for real-world usage
- Designed database schema and managed entity relationships using JPA/Hibernate with SQL Server
- Structured code to ensure clear separation of concerns between layers (domain, application, infrastructure)
